“Problem, Question, Reason, Solution, Teach” (PQRST) model for case discussion: a pilot evaluation to implement in Europe

- **Background;** **Case discussion** is a common activity in general practice training. It is used for both clinical oversight and teaching.
- **PQRST is a structured case discussion tool** in **GP supervision** which should be used in **general practice clinical environments** based training.
- This has potential improve **GP training**, and patient health and safety.
- **Proposal;** Quasi-experimental, mixed methods pilot study involving GP supervisors,
- comprising a pre-post evaluation of a webinar-based educational intervention and demonstration of the PQRST framework,
- both in practice based teaching and assessment.
